

How your enquiry is handled

Information about the contact-form process at kernl.network.

Contact about your data

kernl. GbR, Mihailo Perovic and Maximilian Obermeier, Ottilienstraße 28, 81827 München, Germany;
hello@kernl.network; +49 151 44360879.

Form details

The form sends your name, company, email address, selected service, a short title for custom requests and your message. We use these details to handle your enquiry and reply. Please do not include passwords or confidential login details.

Internal copy before the spam check

Submitting the form first saves a copy in our access-controlled internal Cloudflare library. This copy can remain if you do not complete the subsequent spam check or email delivery fails. A stored copy does not confirm email delivery.

Sending and spam protection

The form then opens FormSubmit, which performs a spam check using Google reCAPTCHA. FormSubmit emails the enquiry to hello@kernl.network. Cloudflare Email Routing forwards the message to the Gmail inbox Mihailo Perovic uses for business enquiries.

Retention by the form provider

FormSubmit states in its documentation that it retains submissions for 30 days. This period does not automatically apply to our internal library or email copies. For questions about your enquiry, storage or deletion, contact hello@kernl.network.
